CROP INFORMATION

Days suitable for fieldwork: 6
Soil moisture supplies: 6% very short, 23% short, 64% adequate and 7% surplus

Field Crops Report
Much of the state experienced dry conditions last week. Sweet potato producers were harvesting. Soybean producers were scouting their fields for stinkbugs. Some soybean growers were spraying defoliant, while many others were already busy harvesting. Some soybean producers who have harvested reported above normal disease and insect damage, but yields were still in the 40-50 bushels per acre range in many areas. Corn and rice harvests were nearing completion. Cotton producers were harvesting, but the harvest was well behind the 5-year average. Sugarcane producers were getting their equipment ready for harvest.

Fruits, Vegetables and Specialty Crops
Vegetable producers continued working fall crops. Crawfish producers were flooding their ponds for the new crawfish season.

Livestock, Pasture and Range Report
Drier weather conditions allowed the second cutting of hay to near completion. Livestock conditions remained good.
